# HIGH QUALITY SMALL FLATBED UV INKJET PRINTERS

The enhanced UJF-3042 / 6042MkII e series consist of two printers. Customers can choose print surface size, print head configurations, ink types and a variety of ink configurations. This makes the e series ideal for companies that want to start with personalization printing or simply expand their existing offerings.

## ■ **Print quality**

With a maximum print resolution of 1200dpi, support of light inks and a newly developed halftone processing technology (MDF2), the image quality has been enhanced while reducing graininess.

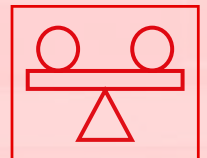

## ■ **Special colours**

With white and clear ink available in every configuration, not only a wide variety of materials or objects (with a flat surface up to 153mm high) can be printed but value can be added using clear ink at the same time. And when the ink adhesion isn't good enough, customers can opt for Printable Primer.

## ■ **Stability**

With automatic maintenance functions (NCU & NRS) and ink sedimentation prevention (MCT), the uptime is enhanced. The new laser obstacle sensor, the full front cover and optional available ionizer unit further enhances the machine's print stability.

## ■ **IoT Ready**

The high and stable productivity makes the UJF-3042 / 6042 MkII e series ideal to be integrated in automated workflows for unattended printing. By supporting MDL commands, which comply with Industry 4.0 requirements, the operation can be fully automated and integrated in a production line with other 3rd party peripherals.

## ■ **User Friendly**

With the improved colour LCD display, all important printer information is directly at your disposal, and the indication light shows the printer's status.
